[Journal of Organizational Change Management](#)

Open Access e-Journals for High School

As of September 2026

1. Sinaya	Sinaya is an online, open-access, and peer-reviewed journal for senior high school teachers and students in the Philippines. It is a tri-annual and bilingual (in English and Filipino) journal with the following themes: 1) Humanities, Arts, and Education; 2) Science and Technology; and, 3) Social Sciences and Business. The journal accepts submissions all year round and does not charge any publication processing fees.
2. International Journal of High School Research	International Journal of High School Research is an open-source and peer-reviewed journal that was started in 2019. IJHSR is open to receiving work in all areas of science and surrounding disciplines, including behavioral and social sciences, technology, engineering, and math. International Journal of High School Research primarily focuses on publishing articles containing new experimental data. It also requires "literature reviews", which are a survey of previously published research, as well as sections where you are expected to draw new conclusions from your research, or discuss what you plan to publish next. The publication notes that the process for literature reviews is extremely selective, as they only publish 2 – 3 articles per issue (6 issues per year).
3. The journal of High School Science	The Journal of High School Science is a peer-reviewed STEAM publication showcasing the ideas and innovative contributions of high school students in the realm of science, technology, engineering, arts, and mathematics.
4. National High School Journal of Science	National High School Journal of Science, or NHSJS, is a free, online, student-run, and peer-reviewed research journal for high school students, run by students. Students can submit original research and short articles in the form of reports, policy, media, technical comments, and letters. Students can submit essays related to any STEM topics including, but not limited to, Biology, Chemistry, Physics, Environment, Policy, etc.
5. Stanford Intersect	Ran by undergraduates at Stanford University and supported by the Stanford STS Program (Program in Science, Technology & Society), Stanford Intersect is an international research journal. The journal publishes research and scholarship on the social factors that are

	shaped by science and technology. Intersect tries to publish three times during each academic year, at the end of Autumn, Winter, and Spring quarters.
6. International Journal of STEM Education	The International Journal of STEM Education, covered by Web of Science's Social Sciences Citation Index (SSCI), has been identified as important to key opinion leaders, funders, and evaluators worldwide and has an Impact Factor of 5.6. SSCI is a carefully selected and evaluated collection that delivers to users the most influential scientific research. All articles published in this journal are discoverable via the Web of Science with full citation counts, author information, and other enrichment. Coverage of the journal records started in 2018.
7. Young Scientist Journal	Young Scientist is another publication that recognizes the achievements of high school scientists. It is published by the Vanderbilt Center for Science Outreach, a group that works in the field of scientific and technological literacy through the establishment of unique partnerships between Vanderbilt University scientists, K-12 educators and students, and the local and global science community.
8. Open Journal in Business and Management	(OJBM): OJBM is an international journal dedicated to the latest advancement in the study of business and management. The goal of this journal is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in different areas of business and management. We recommend OJBM as a good option for students interested in the field of business studies and management. It is one of the few journals that accept research in business and management from high school students.
9. The Journal of Research in High School	The Journal of Research High School (JRHS) is an open-access online research journal that aims at publishing academic work prepared exclusively by high school researchers. JRHS publishes across science to social science. They publish biannually but release publications each month! For the publication at JRHS, in general, there are four processes of publication such as original formatting and plagiarism check, peer review, revision, and editorial decision. Each process has a different timeline but in general, the overall turnover timeline is approximately 3 - 6 months.

10. Walt Whitman
Journal of Psychology

The WWJOP is an entirely student-led publication in which high-school student-conducted research and literature reviews in the field of psychology are recognized. The Journal reaches hundreds of schools and psychology students around the world and is published bi-annually and electronically.

We have found WWJOP to be a fantastic option for Psychology students given that it offers a specialized publication in Psychology at the high school level. It is one of the few journals at this level to offer a subject specialization.
